## Launcher apk 2019

Android startup apps have long been an integral part of the Android experience. If you don't like the way your home monitors look or act, you can simply download an app to change it. There is no doubt that Android launcher apps have a much more diverse set of features than any other type of app and you can actually do some amazing things with these apps. This includes keeping closer to stock like Google's Android or something out there like Niagara Launcher. Here are the best Android launchers right now! We'll list the Google Pixel Launcher. However, it is only available for Pixel devices. We recommend nova, Lawnchair or Rootless if you want a more pixel-like experience. In addition, those looking for the look of iOS should try the recently launched Amoni Launcher (Google Play link). Read next: Android Launchers comparison: What is the best option for you? Action LauncherPrice: Free/\$4.99 + Action Launcher has long been a favorite Android launcher of our readers. It comes with an Android stock feel. However, there are a few extra features over the top that add some uniqueness. Quicktheme allows you to customize the colors of your user interface based on your wallpaper. Shuttters let you control an app's widget without setting it up on the home screen. It even has configuration and customization elements to make your phone feel more like Android Oreo. There is also icon pack support, frequent updates, and more. There's a lot to like about it. Even the app drawer is configurable. AIO LauncherPrice: Free/\$1.99AIO Launcher does it differently than many Android startup apps. Removes the standard home screen in favor of a list of information. It shows things like your latest SMS and missed calls, your media player, your system information (RAM, battery, storage, etc), and even things like news, Bitcoin price, Twitter, and more. The paid version also includes integration for Telegram and your regular widgets from other applications. Not everything should look like Android stock and AIO Launcher certainly shows that it can be done effectively. It is free for most features. The full version is a very reasonable \$1.99.Apex LauncherPrice: Free/\$3.99Apex Launcher has been around for a long time and remains one of the most iconic Android launcher apps ever. Like Action Launcher, it aims to give an Android stock look and feel with a few extra features thrown in for good measure. These include the ability to change things like transition animations, scrolling and there is even a scroll dock where you can put many icons. Apex Launcher also includes a theme machine. The app underwent some big changes in 2018. It looks a lot more modern now. APUS LauncherPrice: FreeAPUS Launcher is a fun app if you like a ton of customization. It boasts a collection of over 50,000 wallpapers along with a ton of extra themes. Some other features include a newsfeed, the ability to hide apps from the app drawer, a built-in app lock and some other goodies. It's not as light or effective as Pixel Launcher style launchers like Nova Launcher, Hyperion, Lawnchair, etc. However, it is much more colorful and ostentatious. Some people prefer it that way. The launcher is free with ad support. The only real complaint is that you can't buy the app to remove ads. Evie LauncherPrice: FreeEvie Launcher was one of our picks for the best Android apps of 2016. He's still an excellent launcher to this day. The launcher has a fairly standard home screen layout along with a universal search, custom shortcuts, and many personalization options. The dock is a little more customizable than most stock launchers on most phones. You can also change things like icon sizes, app drawer and some other things as well. Of course, the launcher manages to stay clean, light, and stock-ish for people who care about it. It may be the best completely free android launcher on the market right now. Hyperion LauncherPrice: Free/\$2.99Substance Launcher is the new kid for the Android launcher block. It slots in nicely between heavier launchers like action and nova and the Android stock experience of Lawnchair. The UI is resolutely stock looking without a ton of bloating or talent. There's a lot of customization potential, though. They include third-party icon support, a changer image shape, theme elements, and some other neat things. It supports Google Feed, but requires a separate download just like most other launchers. It's new, but it's already slots in favorably among the best launchers for Android.Lawnchair Launcher 2Price: FreeLawnchair Launcher is an excellent Android launcher for fans of minimalism. It's an open source project that mimics much of the look and feel of the Pixel Launcher. It has many similar features to the Pixel Launcher along with a few others. These features include icon package support, Google Now integration (with optional and free plugin), adaptive icons, and various other customizations. The original was particularly touted for its stock-like appearance plus its customization features. Developers now list the app as Lawnchair 2 and it's still in beta, but it includes some more modern Android features. The app is also completely free. Lightning LauncherPrice: \$4.99 + \$1.99Festum Launcher used to be a pretty decent, minimal Android launcher. Since then it has evolved into one of the most customizable Android launchers ever made. It's still extremely light too. It enables you to change almost anything on the home screen. You can have multiple sets of home screens for multiple cases. Perhaps its most unique feature is its scripting support. You can use javascript to make Lightning do all sorts of things. There are also additional plugins, language packs and more available for download. The list of features isn't that long by comparison, but you seem to check all the right boxes. The app also has a learning curve, but it's worth finding out. Microsoft Microsoft FreeMicrosoft Launcher is not a new launcher. The application was an arrow launcher. Microsoft rebranded the app in mid-2017. The application has integration with many Microsoft services, including their calendar, e-mail, to-do list application, and direct integration with Microsoft computers. It also has customization features and gesture controls. This returned to beta after rebranding. So, there are probably a few bugs for now. However, it is something different and especially useful for those who want better integration with their Windows PC. Microsoft is rebuilding this application from scratch and you can try it here if you want. This new version will most likely replace this version in this list in the future when it is officially released. Niagara LauncherPrice: FreeNiagara Launcher is the newest launcher app on the list and is the kind of diamond-in-the-rough pick. It features a very minimal UI with a clean appearance, excellent ergonomics and elegant appearance. The app also tries to limit your need to shade notifications with built-in message notifications as well as music controls. There are a few light themeth options available along with basic things like icon pack support. It's still in early beta access at the moment so there may be the occasional bug, but if you press the button below and it's not in early access anymore, let's assume these bugs are fixed. Nova LauncherPrice: Free/ \$4.99 Doesn't get too much better than Nova Launcher. Like apex launcher, Nova has been around the good old days. It remains not only relevant, but one of the best Android startup app options available. It has a laundry list of customization features that include gesture support, the ability to customize the look and feel of the app, icon package support, themes, and much, much more. The application is also updated at a dizzying pace which means bugs generally get squished quickly and new features are added consistently. It also comes with the ability to back up and restore your home screen layouts for when you finally switch to a new phone. It's what I would recommend you try first. Poco LauncherPrice: FreePoco Launcher is the stock launcher for the popular (and cheap) Pocophone. It's really available for most Android devices and that's kind of surprising considering Google won't even release their own. This is a pretty basic launcher. It has your basic Stock Android-ish layout with icons on a home screen and a swipe-to-access drawer app. the home screen and the background of the app drawer. It also has a privacy option that hides icons from the app drawer if you want. Otherwise, it runs light and smooth. It's an easy recommendation for people with lower quality devices and those with higher quality devices who want something really simple. Rootless LauncherPrice: FreeRootless Launcher is a decent, stock Android style launcher from 2018. It's actually a pretty basic experience. You can get an Android stock look and feel with some additional customization elements to The look. Some of the features include icon pack support, adaptive icon pack support, an icon format selector, themes based on your wallpaper, and you can change the location of the search bar. You can also get Google Feed working on this launcher, but like most it requires an extra plug-in download and installation. The website with the instructions for which they are in the Google Play description. This is right there with Hyperion and Lawnchair as a great choice for stock Android fans. Smart Launcher 5Price: Free/Up to \$6.99Smart Launcher 5 is a huge difference from Smart Launcher 3. Fortunately, it's in a positive direction. It features a modern ui, theme environment features, modern features such as adaptive icons, and more. It even has a time and clock widget and gesture controls. Not as powerful as nova launcher or similar launchers. However, it has enough features to be quite enjoyable. It feels like it competes directly with Action Launcher and similar applications when it comes to customization and usability. Total LauncherPrice: FreeTotal Launcher is not the most popular launcher on the list. However, it's still pretty good. It boasts a very high level of customization along with various themes and some other features. However, it also comes with a steeper learning curve than most. Those who stay and learn what they are doing are faced with something truly special. On the other hand, those who just want something simple that works right may want to try something like CPL, Rootless Launcher, Hyperion Launcher, or one of the other options. If we missed any of the best Android startup apps, tell us about them in the comments! In case the Pixel Launcher ever does it on Google Play, you can bet it will end up on this list after rush!
